DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remarks on pages 6-8, filed March 27, 2006 have been fully considered and are persuasive. The rejection has been withdrawn.

Allowable Subject Matter

2. Claims 1-8 and 15-24 are allowed and re-numbered from 1-18.
3. The following is an examiner's statement of reasons for allowance:

The instant invention defines an anomalous shadow detection system in claims 1 and 15. The claimed invention distinguishes over the prior art by the manner in which the detection means detects the suspected anomalous shadow. The claimed combination allows for improving a system for detecting anomalous shadow.

This type of system is conventional in the art. However, the prior art of record fails to teach anomalous shadow detecting means for detecting a suspected anomalous shadow from image data descriptive of an inputted image according to a prescribed detection process, and image output means for outputting information including at least information identifying the detected suspected anomalous shadow, wherein the image output means further outputs types and values of one or more standard parameters concerning the suspected anomalous shadow in a visually recognizable manner together with the information including at least the information identifying the suspected anomalous shadow, wherein each of said one or more standard parameters is a parameter used for distinguishing the suspected anomalous shadow from a normal shadow, and the anomalous shadow detecting means detects the suspected anomalous shadow by judging whether a probability that a shadow detected according to the prescribed detection process is a malignant tumor is high. These elements in combination with all of the other elements of the claims are not taught or fairly suggested in the prior art of record. The dependent claims 2-8, 10-14 and 16-24 are allowed for the same reasons.
